NexPort Solutions releases NexPort Campus 5.0.10

OKLAHOMA CITY – May 1, 2014 – NexPort Solutions Group latest release, NexPort Campus 5.0.10, introduces performance enhancements that include faster deletion of several items, generating certificates upon completion of an enrollment, options that reduce the chance of inadvertently resetting user search Indexes and a separate methods for resetting those Indexes. 5.0.10 also provides fixes for seven bugs.

With this release, NexPort Campus faster and more reliable deletions of Organizations, Subscriptions and Question Banks. Organization administrators can now delete subscriptions and other items without putting a load on the system and with increased speed.

Users will also experience an enhancement with certificates being generated simultaneously when a syllabus is completed. Certificates are now created when a student completes an enrollment, with certificates never having to be regenerated. This ensures that students will always receive the certificate at the time of enrollment completion.

Two additional enhancements developed with this release provide organization administrators with safeguards on resetting user search Indexes. Resetting Indexes now provides a confirmation dialog, preventing admins from inadvertently clicking the reset. Furthermore, there are now two separate methods for resetting indexes. The first process removes existing indexes, with the second only re-enqueuing all data without destroying the existing indexes.

Seven bug fixes are also included in the NexPort Campus 5.0.10 release. These fixes include:

- Fill-in-the-blank response question options for surveys via My Events now saving correctly
- “Move Group” permission now allowing the correct functionality of moving groups for users with that permission.
- “Copy Catalog” permission now allowing the correct functionality of copying catalogs to other organizations for users with that permission.
- “Customize Organization” permission now allowing the correct functionality of customizing organizations for users with that permission.
- The “Create Organizations” permission now allows the correct functionality of creating organizations for users with that permission.
- Refreshing or navigating back to “Manage Groups” after deleting an organization no longer generates an error message.
- Optimized group tree insert performance to allow the adding of 20 or more groups to the NexPort Campus directory without causing a system slow down.
